Select Fill

Common Fill

Top Soil

Washed Sand (Concrete Sand)

Fill Sand

Manufactured, Cushion, Bedding, Masonry Sand

Select Fill

Tested and uniform sand-clay blend. Select fill is an elevated version of common fill, unique to each supplier. Consistency varies but aligns with city or state standards.

Common Fill

Untested and inconsistent mixture of sand and clay. Common fill is an affordable fill material that can be used to fill in large voids. Often high in clay content, which can make it difficult to spread and may hinder plant growth.

Top Soil

The outermost layer of material, top soil is often rich in nutrients and is great in applications to promote plant life. Often a black color, but consistency and coloring can vary greatly from supplier to supplier.

Washed Sand (Concrete Sand)

Washed concrete sand is created by washing and screening coarse sand to eliminate impurities in the material. This process results in a clean & consistent sand with optimal particle size, making it ideal for ready mix & other commercial applications.

Fill Sand

Untested, but consistent, mixture of majority sand and a little clay. The material is excellent for leveling pools, patios, walkways, and yards while still allowing plant life to grow.

Manufactured, Cushion, Bedding, Masonry Sand

Given the diverse sand choices for various purposes, consulting a local expert is key. Local availability ensures cost-effective & fast delivery to your site.
